## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, drawn to a process of forming a semiconductor device, classified in class 438, subclass 677+.
- II. Claims 8-15, drawn to a semiconductor structure, classified in class 257, subclass 1+.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the semiconductor structure could be made by a different process. For example the continuous silicide trap could be formed by depositing a metal silicide, which does not require a reaction with a refractory metal.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to E. Eric Hoffman on August 15, 2001 to request an oral election to the above restriction requirement, but did not result in an election being made.
